Open to relocation: Cyprus, Spain, Portugal, Serbia | Remote worldwide | GMT+5 (EU overlap CET ±2)

SUMMARY

Senior Frontend Engineer with 6+ years of commercial experience in e-commerce, fintech, and govtech. Specializing in TypeScript (strict mode), Vue 3 / Nuxt 3, and standardizing and scaling frontend infrastructure at the product level (20+ applications, 15M+ MAU). I build quality standards, tooling, and processes that accelerate teams: shared packages, linters, CI/CD pipelines, and observability. I mentor developers, deliver technical talks, and take ownership of product-level technical decisions.

TECHNICAL STACK

Core: TypeScript (strict mode, custom lint rules, advanced generics), JavaScript (ES2024+)

Frameworks: Vue 3, Nuxt 3, React, Next.js, Remix.run

State & API: Pinia, Vuex, TanStack Query (vue-query), Apollo GraphQL, REST, graphql-request, Axios

DX & Quality: ESLint/Stylelint/Prettier (custom plugins), Sentry (performance, replays, source maps), Storybook, knip

Build & Infra: Vite, Webpack, Docker, GitLab CI/CD, Node.js (BFF), nginx

Testing: Vitest, Jest, Playwright

Styles: SCSS, LESS, Tailwind CSS, PostCSS, CSS Modules

EXPERIENCE

Kaspi.kz, Almaty, Kazakhstan

Senior Frontend Engineer | Jan 2024 – Present

- Owner of shared packages for 10 of 20+ Kaspi Shop applications (15M+ MAU): standardized tsconfig (strict), ESLint, Prettier, Stylelint, lefthook, and CI pipelines. Reduced Code Review comments from ~25 to ~10 per MR by converting recurring feedback into custom lint rules and ESLint/Prettier plugins (saving the team ~10 hours/week).
- Cut application load time by 2x: implemented background token refresh (Axios interceptors + Apollo errorLink) — cold start from ~10s to ~5s, warm start from ~5s to ~1–2s (Lighthouse, Sentry Performance). Resolved cookie desynchronization across Kaspi Pay ecosystem apps.
- Typed and standardized the WebView API: identified all methods from mobile commands and from Android code in Kotlin, built async Promise-based wrappers with full documentation and tests. Delivered a technical talk to 20–30 frontend engineers.
- Mentoring: grew a QA specialist to Middle Frontend in 3 months; two junior developers promoted to middle within a year. Delegate tasks to 4 direct and 10 indirect reports as a project tech lead.
- Set up Sentry with full configuration (performance monitoring, session replays, source maps in CI/CD, custom WebView tags, auto-serialization). Reduced error volume from 10–15k to 4k events/day. Optimized performance: code splitting, lazy loading, woff2 variable fonts, CDN, HTTP/2. Regularly remove dead code via knip (first run: ~2,000–3,000 lines).
- Determined minimum supported browsers (2018+) based on Sentry, Grafana, and Android/iOS team data; configured transpilation, PostCSS, and polyfills for full modern syntax support.

Samgau Holding, Astana, Kazakhstan

Senior Frontend Developer | Oct 2022 – Jan 2024

- Led the refactoring of an integrated tax administration system for government employees. Migrated from legacy React + Webpack to Vite, removed unsupported legacy packages (antd pro) — production build sped up by 83% (36 min → 6 min), dev server by 95% (1.5 min → 1–5 sec).
- Eliminated ~9,000 linting and type errors (~50% automated, the rest fixed manually), introduced ESLint, Prettier, and type checking in CI. Codebase became consistent; review speed increased significantly.
- Built a JSON-driven template system for repetitive tax admin forms: form description in JSON → parsing and rendering on the frontend. Accelerated delivery of new sections and reduced code duplication.

League of Digital Economy, Moscow, Russia

Middle Frontend Developer (remote) | Nov 2021 – Oct 2022

- Built a CI/CD pipeline with dynamic port allocation, enabling each developer to deploy their own frontend version to the QA environment. Reduced the risk of merging incomplete work into master.
- Introduced business-domain grouping (Feature Driven) in a mortgage lending project for Rosselkhozbank (400+ components) — simplified codebase navigation for the team.

OCRV, Samara, Russia

Middle Frontend Developer (remote) | Aug 2020 – Nov 2021

- Built from scratch an employee feedback platform for Russian Railways management (85,000 employees). Implemented hierarchical analytics across 10,000 organizational units with list virtualization and drill-down navigation.
- Introduced a BFF on Node.js/Express to aggregate 10+ requests into one — reduced frontend load and simplified work with a suboptimal backend API.

BuzzGuru (Wisebits Group), Limassol, Cyprus

Junior Frontend Developer | Mar 2019 – Aug 2020

- Developed 10+ types of analytical charts (SVG, Canvas) for an influencer and advertiser analytics platform.
- Migrated UI from Bootstrap and third-party UI kits to custom components (open source: github.com/lskjs), eliminating external library dependencies.

EDUCATION

Togliatti State University, Togliatti, Russia — 2020

Bachelor of Science, Mathematical Software and Information Systems Administration

LANGUAGES

Russian (native), English (B1)
